**Correction**

In the conversion of the President's Page (J Am Coll Cardiol, 1983;1(3):972-4) from an address to a published version, specific reference numbers were omitted from the text. Bolinger and Aklers should be referenced for the material on information theory and the inadequacies of list criteria; Greenfield, Lewis, Kaplan and Davidson for criteria mapping and Pryor and Warner, et al, for the considerations relative to an "ideal" system.

Uniform requirements for manuscripts submitted to biomedical journals. *Ann Intern Med* 1982;96:766-71).

For further information on submission of manuscripts to JACC, see page A-15.

Number references consecutively in the order in which they are first mentioned in the text. Identify references in text, tables and legends by arabic numerals (in parentheses). References cited only in tables or in legends to figures should be numbered in accordance with a sequence established by the first identification in the text of the particular table or illustration.

Use the style of the examples below, which are based on the formats used by the U.S. National Library of Medicine in *Index Medicus*.

The titles of journals should be abbreviated according to the style used in *Index Medicus*.

Try to avoid using abstracts as references; "unpublished observations" and "personal communications" may not be used as references, although references to written, not verbal, communications may be inserted (in parentheses) in the text. Include among the references manuscripts accepted but not yet published; designate the journal followed by "in press" (in parentheses). Information from manuscripts submitted but not yet accepted should be cited in the text as "unpublished observations" (in parentheses).

The references must be verified by the author(s) against the original documents.

Examples of correct forms of references are given below.
