<p>*Completeness is estimated as the number of patients with information on the variable divided by the total number of patients registered. Both missing values and registrations of "unknown" are counted as incomplete cases. †Categorized as active, never, previous, or unknown. ‡Categorized as recently measured increased blood glucose, diet-treated diabetes, diabetes treated with oral antidiabetic medications, or diabetes treated with insulin. §All individual antiplatelet and anticoagulant drugs used up to 5 days before the procedure are registered. ¶All individual EuroSCORE variables are also registered (data not shown). ¶¶Among CABG procedures. **Among On-Pump CABG procedures. ††Hypo- or normothermia. ‡‡Categorized as mechanical support, medically stabilized, stable without medication, or unstable. ***Anesthesia monitoring and drug type. EuroSCORE = European System for Cardiac Operative Risk Evaluation; other abbreviations as in Table 1.</p>
